 - SharePoint Fest Conference Chicago 2014 - Speakers:** Venue & Hotel Speakers Sponsors Abstracts Register Contact Portal ... speakers are subject to change without notice ... Ira Fuchs, Author (ws301, pwr100, pwr202 ... He is the author of two ...
- Preview Panel (Right):** Displays a document titled "Benefit Choice Options Period" with a thumbnail image and text: "Enrollment Period May 1 - May 31, 2010". Below the preview, it says "Changed by Mark Leher on 4/26/2010 10:54 AM" and provides actions: OPEN, FOLLOW, SEND, VIEW LIBRARY.

This is a search in SharePoint Online without taxonomy or metadata tagging. The keyword search results can only be filtered by author, date, and file type. The user does not have the ability to narrow results based on the topic of the documents.

After WAND Taxonomy for SharePoint

The screenshot shows a SharePoint search interface. At the top, there's a blue navigation bar with 'Office 365' and 'Sites'. Below it, the search bar contains 'insurance'. To the left, a sidebar shows a list of filters under the heading 'HR', which is highlighted with a yellow box. The filters include: Dental Insurance Plans (3), Health Insurance Plans (3), Long Term Disability Insurance Plan (3), Company Handbooks (2), Life Insurance Beneficiary Designations (1), Life Insurance Plans (1), New Employee Orientation (1), W-2 Forms (1), and SHOW FEWER. The main search results area shows several items, with the top one being '10900-State of Illinois Benefits Handbook'. To the right, a preview of a document titled 'Benefit Choice Options Period' is shown, featuring a family photo and the text 'Benefit Choice Options Period' and 'Enrollment Period May 1 - May 31, 2010'.

This is the same search in SharePoint Online after a WAND Taxonomy has been installed and content has been tagged with taxonomy metadata. Shown in the yellow box, the user can now filter the search results using highly relevant business terminology to narrow the number of results to a manageable number in just a few clicks.

Using a WAND Foundation Taxonomy significantly reduces the time and expense to create a relevant taxonomy in SharePoint.
